about us.

(Tension Group, Falun)

contact:
lotta@tension.se

We use new technology and develop innovative solutions to help businesses reach their full potential.

It may sound like fluff, but it's what we do here. We bridge over gaming platforms, code standards, and graphic design and come up with crazy new ideas - with hardware that sometimes doesn't make any sense. We've been partying like this since 1999. Based in Falun, Sweden, Tension also includes the companies

Tension Technology, Tension Education, Megafront, PlaygroundSquad, and Adit Studios.

The businesses within the Tension Group are all different companies but with the same mojo: **"Having fun with technology through a gamers' perspective."**

what we're looking for.

program- mer

Communicative person that
strive to learn new things.

Someone who thinks that
frontend and app development
seems like fun.

Knowledge of C++ is super
important!

Knowledge in Noesis is a BIG
plus.

If you have some skills in
WPF, XAML, Unreal, or Mod-
el-view-ViewModel, that's
also great!

graphic designer

Someone that dare ask ques-
tions when they need to.

Communicative person that
understand the importance of
the whole team's skills.

Driven and curious person
willing to dive into a task or
assignment you don't know
much about but have a mind-
set that you can solve it
through teamwork.

A person with knowledge of
Unity & Unreal is a plus.

Someone who understands UI
& UX – and likes it!

Internship at Tension

Internship at Tension

contact:
lotta@tension.se

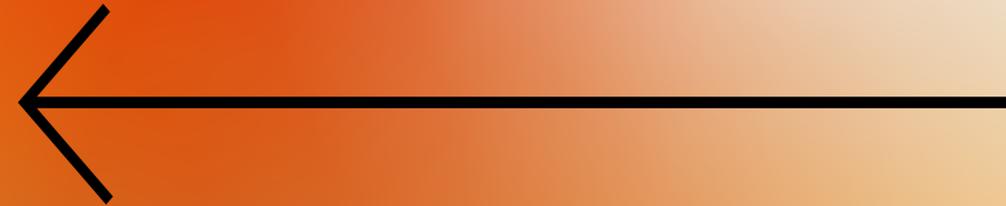

Nicklas was a game programming student at PlaygroundSquad when he decided that he wanted to do his internship at Tension.

During his internship he got to do different tasks that in the end got him employed at Tension.

started as a intern, now he's a supervisor at PlaygroundSquad and true brogrammer within the Tension Group.

what you'll be doing here

Mainly working in projects where we deliver applications to customers but also work with game development, proof of concepts, demos, and other tasks. Our programmers work primarily with app development but also do a lot of in-house automation development of our own software and other tools (such as TenGine & Gateway).

Something that you also will be doing at Tension is teamwork: it's essential that you can work (and get along) in a group with others. We don't demand you to be a chitter-chatter, but you must understand the importance of teamwork.

We'd like to see you being able to take on responsibilities without someone having to tell you what to do. A driven person with a will to do stuff outside your skill zone. You'll get all the support and help you'll need from us, but the drive and will to learn is something that you'll be responsible for yourself.

Here, you'll get to do whatever you think is fun and have skills in doing. If you're a 3D artist that would like to do some coding or a backend developer that would like to learn more about automation – we'll encourage you to do it! Nothing's written in stone regarding your work tasks. You can be involved and influence your days here at Tension!

Thanks for reading.

something's unclear?

Don't hesitate to contact us. We'd love to tell you more about us and talk about your internship here!
